Structure and Purpose

The template for Performance Plans was developed to facilitate the work of Member States and NSAs in their tasks to draw up and adopt performance plans and targets for RP4. It follows the structure provided for in Annex II of Commission Implementing Regulation (EU) No 2019/317 of 11 February 2019 laying down a performance and charging scheme in the Single European Sky and repealing Implementing Regulations (EU) No 390/2013 and (EU) No 391/2013.

Furthermore, to reduce the administrative burden on Member States the template is already prefilled to the maximum extent possible.

In light of this, different field categories have been identified and colour-coded to facilitate the reporting:

| Colour coding | | |
|---------------|--|--|
| Item 1 | Information to be provided by Member States | |
| Item 2 | Pre-filled but editable information | |
| Item 3 | Pre-filled or automatically computed information | |
| Item 4 | Dynamic selection | |

States can easily provide additional narrative material in the annexes which form an integral part of the performance plan.

The worksheets in the Excel file replicate the said structure and the tabs for main sections have been highlighted in black, while subsections are in light brown as shown below:

Tips and tricks

- · Since the Excel file is completely unprotected, be careful when filling the cells or adding lines/columns to avoid erasing the prefilled or precalculated areas.
- · Manually adapt height of cell if necessary, in particular for text or description boxes.
- · Within a cell, press ALT+ENTER to jump to the next line.

For existing text from another source, copy and paste into the formula bar will ensure that all text remains within a single cell.

In order to print your performance plan, please refer to section "Signatories".

3.4.6.2 - Investment costs

a) Depreciation costs

Method adopted for the calculation of the depreciation cost (point 1.3 of Table 1):

If current cost accounting is applied, equivalent historical cost accounting figures have to be provided in Annex E in order to allow for comparison

b) Cost of capital

Description of the assumptions used to compute the cost of capital (point 1.4 of Table 1), including the composition of the asset base, the return on equity, the average interest on debts and the shares of financing of the asset base through debt and equity

SECTION 3.6: DESCRIPTION OF KPAS INTERDEPENDENCIES AND TRADE-OFFS INCLUDING THE ASSUMPTIONS USED TO ASSESS THOSE TRADE-OFFS

3.6 - Description of KPAs interdependencies and trade-offs including the assumptions used to assess those trade-offs

- 3.6.1 Interdependencies and trade-offs between safety and other KPAs
- 3.6.2 Interdependencies and trade-offs between capacity and environment
- 3.6.3 Interdependencies and trade-offs between cost-efficiency and capacity
- 3.6.4 Other interdependencies and trade-offs

3.6 - Description of KPAs interdependencies and trade-offs including the assumptions used to assess those trade-offs

| 3.6.1 - Interdependencies and trade-offs between safety and other KPAs |
|---|
| |
| a) With regard to the over-riding safety objectives, what pressures does your organisation experience in meeting the cost, capacity and environmental KPAs? Describe how you ensure that these pressures do not negatively impact safety within your organisation. Describe the mitigation measures that have been introduced to demonstrate that safety performance has been sustained and what monitoring has been envisaged to measure the effectiveness of those mitigations. |
| |
| |
| b) What are the main assumptions used to assess the interdependencies between safety and other KPAs? Please provide a detailed analysis. |
| Describe the analysis methodology and the data that has been used to assess the interdependencies between safety and other KPAs. What indicators, in addition to those described in the Regulation, are used for monitoring during the reference |
| period to ensure that the targets in the KPAs of capacity, environment, and cost-efficiency are not degrading safety? |
| |
| |
| c) Describe the organisation's philosophy for managing competing priorities between the KPAs effectively – for instance |
| delaying programmes to manage competing demands. It is expected that the organisation uses its business risk |
| management processes to assess the consequential risks of the organisation's competing priorities to achieve its business |
| |
| |
| |
| |
| d) What trade-offs in safety have been accepted to manage resources shortfalls in realising the organisation's objectives to |
| meet the cost, capacity and environment KPA targets? Have trade-offs restricted the release of staff for safety activities, |
| such as safety training (ATC training excepted), safety surveys, safety audits, safety assessments, safety studies and |
| |
| |
| |
| |
| e) Has the State reviewed the ANSP financial and personnel resources that are needed to support safe ATC service provision |
| through safety promotion, safety improvement, safety assurance and safety risk management in line with planned changes |
| that will enable targets in other KPAs to be achieved? Please provide a detailed explanation. |

5.2 - Capacity incentive schemes

5.2.1 - Capacity incentive scheme - En route

a) Parameters for the calculation of financial advantages or disadvantages - En route

| En route | Expressed in | Value |
|---------------------------|-----------------|-------|
| Dead band Δ | fraction of min | |
| Max bonus (≤2%) | % of DC | |
| Max penalty (≥ Max bonus) | % of DC | |

b) Pivot values - En route

c) Modulation mechanism (if applicable)

Section to be filled out only if the option for modulated pivot values has been selected under b) above.

| Modulation mechanism of pivot values | Click to select |
|--------------------------------------|-----------------|

Based on the modulation mechanism(s) selected above, provide a detailed description of the principles and methodology used to modulate the pivot values

Option A) - Modulation based on unforeseen changes in traffic

Option B) - Modulation limiting pivot values to C, R, S, T, M, P delay codes

The scope of the incentives is limited to delay causes related to ATC capacity, ATC routing, ATC staffing, ATC equipment, airspace management and special events with the codes C, R, S, T, M and P of the ATFCM user manual

Explanation on the methodology used to modulate the pivot values accordingly

Additional information in the case of the combination of A) and B)

If the modulation of pivot values is based on both options A) and B) above, provide additional information on how these two modulation mechanisms are applied in combination with each other

a) Parameters for the calculation of financial advantages or disadvantages - Terminal

| Terminal | Expressed in | Value |
